

# Sullair SRF 1/4000™

4000 Hour Compressor Fluid

*Lasts 4 times longer than  
conventional hydrocarbon fluids.*

## Key Benefits

- SRF 1/4000™ is less volatile than solvent refined fluids, so fluid make-up is reduced.
- Enhanced lubrication properties of SRF 1/4000™ provide an excellent environment for rolling element bearings.
- High oxidative stability contributes to SRF 1/4000™'s long life.
- High viscosity index for shear stability.
- High temperature stability.
- Low temperature fluidity for cold ambient start-ups means (for most applications) one fluid for year-round operation.

## SRF 1/4000™. Single Shift–One Year

### Sullair SRF 1/4000™

Under normal operating conditions, the fluid will perform for one year or 4000 hours, whichever comes first.

### Premium performance

SRF 1/4000 outperforms other petroleum-based fluids.

### Lasts longer, costs less

SRF 1/4000 combines the long life of synthetics with the economy of petroleum-based fluids.

### Composition of SRF

SRF 1/4000™ is a highly refined semisynthetic hydrotreated paraffinic oil. It is produced by a patented hydrotreating process. The process uses a two-stage pressure hydrogenation system combined with dewaxing. Volatile components are removed through fractionation.

### Cuts downtime and maintenance

Running SRF 1/4000™ in your machine for 4000 hours can reduce labor and downtime costs for fluid changeout.

SRF 1/4000™

Mineral Oil

P.A.O.

These photographs illustrate the superior thermal stability of SRF 1/4000™, as compared with a solvent refined mineral oil and P.A.O. Fluids were heated to 275°F (135°C) for 200 hours. The mineral oil and P.A.O. have formed a varnish and insolubles, indicating a chemical breakdown. The SRF 1/4000™ remains clear; its color has simply deepened. While the viscosity of the other two fluids has increased, that of SRF 1/4000 remains unchanged—proving that SRF 1/4000™ is more stable at high temperatures for extended periods of time.
